Sleep researchers have found that people can make themselves wake up at a given time simply by deciding to do so before they go to sleep. Scientists took two groups of volunteers and, at nightfall, told one group that they would be woken at 6 a.m. and the other that they would be woken at 9 a.m. The sleepers' levels of the hormone adrenocorticotropin, which is known to cause spontaneous awakening, were then measured. In each group, there was a rise in the levels of the hormone one hour before the volunteers expected to get up. The three -hour difference between the rise in hormones in the two groups suggests that the body can be programmed to wake up on command.

24. The people studied by the researchers ...

- A) suffered from insomnia.
B) were having difficulty getting up early.
C) participated in the experiment at their own will.
D) were unable to wake up by other means.

- A) is produced by the body some time before a person wakes up
B) is responsible for causing sleeplessness in a number of people
C) is used by doctors for people who have difficulty getting up
D) exists in higher levels in people who wake up very early

26. The experiment related in the passage has indicated that ...

- A) hormones are more effective than outside stimuli for waking people.
B) our bodies are capable of being conditioned to wake up at a suggested hour.
C) people who wake up at 6 a.m. have more hormones than 9 a.m. risers.
D) the hormones that wake people up have a three -hour long cycle.

The Yangtze river dolphin has been declared "functionally extinct". This means that although there may be some of them left, there aren't enough to repopulate the species. The reason behind this tragedy is a combination of water pollution and hydro-electric dam projects. Hydro-electric dams are harmful because they isolate groups of dolphins, creating smaller populations. This means that numbers are lower, and breeding is less likely.

Now there are fears for the future of another breed of dolphin, the Amazonian pink river dolphin. The Brazilian government are planning a hydro-electric plant in the middle of their habitat. Hunting also threatens the animals. They're still widespread compared to other species, but there is a sharp decline in numbers - roughly 10% per year. "The number is worrying", said Vera da Silva, a biologist at the National Institute of Amazonian Research.

32. What is the text about?

- A) *The danger of hunting for the Brazilian population.*
- B) *The breeding of small river dolphins.*
