One of the smallest of all mammals is the shrew, a mouse like creature with a head and body length of only 3.8 centimetres. All shrews are small, with dense, velvety fur, long tails, and tiny eyes and ears. Shrews have been called blood-thirsty, though the label is not entirely accurate because they must eat almost constantly to stay alive. The animal is believed to have a very high metabolic rate and cannot live more than a few hours without food. In the absence of normal prey, it will turn to cannibalism to survive. The shrew, or some closely related animal, can be found on every continent except Australia. Since this tiny animal has a reputation for having a very bad temper, the adjective "shrewish" is sometimes used to describe a certain type of women.

24. The passage tells us that the shrew ...

- A) *is in the habit of eating every two hours.*
B) *lives in dense forests.*
C) *is similar to a mouse in appearance*
D) *has a very short life span.*

25. The passage states that shrews ...

- A) *are the smallest living mammals.*
B) *eat rarely but in large amounts at a time.*
C) *eat each other when they can't find any food.*
D) *are found in huge numbers in Australia.*

26. From what is stated in the passage, we can infer that a shrewish woman is someone who ...

- A) *has tiny eyes and ears.*
B) *is noticeably smaller than the average.*
C) *is very fond of velvet and fur.*
D) *easily gets annoyed.*

The Yangtze river dolphin has been declared "functionally extinct". This means that although there may be some of them left, there aren't enough to repopulate the species. The reason behind this tragedy is a combination of water pollution and hydro-electric dam projects. Hydro-electric dams are harmful because they isolate groups of dolphins, creating smaller populations. This means that numbers are lower, and breeding is less likely.

Now there are fears for the future of another breed of dolphin, the Amazonian pink river dolphin. The Brazilian government are planning a hydro-electric plant in the middle of their habitat. Hunting also threatens the animals. They're still widespread compared to other species, but there is a sharp decline in numbers - roughly 10% per year. "The number is worrying", said Vera da Silva, a biologist at the National Institute of Amazonian Research.

32. What is the text about?

- A) *The danger of two breeds of dolphins disappearing.*
- B) *The danger of hunting for the Brazilian population.*
- C) *The breeding of small river dolphins.*
- D) *Hydro-electric dam projects on the Yangtze river.*

33. What does the number 10 in the text refer to?

- A) *The percentage of living Yangtze river dolphins.*
- B) *Groups of biologist who are trying to repopulate dolphins.*
- C) *Governmental organizations which fight the pollution of rivers.*
- D) *The percentage of Amazonian dolphins which die out every year.*

The Great Pyramid of Giza, a monument of wisdom and prophecy, was built as a tomb for Pharaoh Cheops in 2720 B.C. Despite its antiquity, certain aspects of its construction make it one of the truly great wonders of the world. The four sides of the pyramid are aligned almost exactly on true north, south, east, and west - an incredible engineering feat. The ancient Egyptians were sun worshippers and great astronomers, so computations for the Great Pyramid were based on astronomical observations.

Explorations and detailed examinations of the base of the structure reveal many intersecting lines. Further scientific study indicates that these represent a type of time line of events past, present, and future. Many of the events have been interpreted and found to coincide with known facts of the past.

Others are prophesied for future generations and presently are under investigation.

Was this superstructure made by ordinary beings, or one built by a race superior to any known today?

34. What did the ancient Egyptians base on their calculations?

- A) *knowledge of the earth's surface*
- B) *advanced tools of measurement*
- C) *advanced technology*
- D) *observation of the celestial bodies*

35. Why was the Great Pyramid constructed?

- A) *as a solar observatory*
- B) *as a religious temple*
- C) *as an engineering feat*
- D) *as a tomb for the pharaoh*

36. Why is the Great Pyramid of Giza considered one of the Seven Wonders of the World?

- A) *it is perfectly aligned to the four cardinal points of the compass and contains many prophesies*
- B) *it was built by a super race*
- C) *it is very old*
- D) *it was selected as the tomb of Pharaoh Cheops*
