In the past, before technology was used to monitor the weather accurately, people looked at the skies, watched how animals and plants behaved, and relied on signs and superstitions to forecast the weather. Indeed, some people still believe that, when cows lie down or a cat sneezes, it is going to rain. Nowadays, scientists who study the weather, called meteorologists, use many different methods to make their forecasts. Satellites monitor our weather and send information to computers at special processing stations. On the ground, weather stations all over the world record wind speeds and directions, temperature, clouds and air pressure.

24. It is clear from the passage that reasonably accurate weather forecasting ...
- A) is now available worldwide.
 - B) is just one stage in an effort to control the climate.
 - C) is of little importance to most people in the world.
 - D) does not require much technological assistance.

25. As is pointed out in the passage, before the coming of technology, ...
- A) several methods were used in an effort to forecast the weather.
 - B) the only way to learn about the weather was through the behaviour of plants and animals.
 - C) the methods used to forecast the weather are all now regarded as completely useless.
 - D) people weren't really interested in weather conditions.

26. According to the passage, it is now possible, with the aid of technology, to forecast the weather, but ...
- A) long-term forecasts are still far from accurate.
 - B) changing wind speeds can affect predictions.
 - C) much relevant material is never processed.
 - D) it is still a very complex process.

The Yangtze river dolphin has been declared "functionally extinct". This means that although there may be some of them left, there aren't enough to repopulate the species. The reason behind this tragedy is a combination of water pollution and hydro-electric dam projects. Hydro-electric dams are harmful because they isolate groups of dolphins, creating smaller populations. This means that numbers are lower, and breeding is less likely.

Now there are fears for the future of another breed of dolphin, the Amazonian pink river dolphin. The Brazilian government are planning a hydro-electric plant in the middle of their habitat. Hunting also threatens the animals. They're still widespread compared to other species, but there is a sharp decline in numbers - roughly 10% per year. "The number is worrying", said Vera da Silva, a biologist at the National Institute of Amazonian Research.

32. What is the text about?

- A) Hydro-electric dam projects on the Yangtze river.
- B) The breeding of small river dolphins.
- C) The danger of two breeds of dolphins disappearing.
- D) The danger of hunting for the Brazilian population.

33. What does the number 10 in the text refer to?
- A) *The percentage of Amazonian dolphins which die out every year.*
 - B) *Groups of biologist who are trying to repopulate dolphins.*
 - C) *The percentage of living Yangtze river dolphins.*
 - D) *Governmental organizations which fight the pollution of rivers.*

Of the six outer planets, Mars, commonly called the Red Planet, is the closest to Earth. Mars, 4,200 miles in diameter and 55% of the size of Earth, is 34,600,000 miles from Earth, and 141,000,000 miles from the Sun. It takes this planet, along with its two moons, Phobos and Deamos, 1,88 years to circle the Sun, compared to 365 days for the Earth.

For many years, Mars had been thought of as the planet with the man-made canals, supposedly discovered by an Italian astronomer, Schiaparelli, in 1877. With the United States spacecraft Viking I's landing on Mars in 1976, the man-made canal theory was proven to be only a myth.

Viking I, after landing on the soil of Mars, performed many scientific experiments and took numerous pictures. The pictures showed that the red colour of the planet is due to the reddish, rocky Martian soil. No biological life was found, though it had been speculated by many scientists. The Viking also monitored many weather changes including violent dust storms. Some water vapour, polar ice and permafrost (frost below the surface) were found, indicating that at one time there were significant quantities of water on this distant planet. Evidence collected by the spacecraft shows some present volcanic action, though the volcanoes are believed to be dormant if not extinct.

34. Which of the following is not true?
- A) *Mars has two moons*
 - B) *Martian soil is rocky*
 - C) *Mars is larger than Earth*
 - D) *It takes longer for Mars to circle the Sun than it takes Earth*

35. Man-made canals were supposedly discovered by ...
- A) *Schiaparelli*
 - B) *Phobos*
 - C) *Martian*
 - D) *Viking I*

36. Mars has been nicknamed as ...
- A) *Martian*
 - B) *Viking I*
 - C) *The Red Planet*
 - D) *Deimos*
