Palmistry is the practice of 'reading hands', of gaining knowledge about personality, past individual history, and likely future events by examining the shape and size of the fingers and, most important, the lines and bumps on the palms themselves. There is some evidence that palmistry may have begun in the Stone Age. Hand outlines can be seen in black and red pigments on the walls of the ancient caves of Almira in Spain and in other European caves. Palmistry as it exists today probably had its origins in ancient India long before recorded history and found its way into western Europe through nomadic bands of Gypsies, who made contact with Europe in the 15th century.

Not since Americans crossed the continent in covered wagons have they exercised and dieted as strenuously as they are doing today. Consequently, they do not only look younger and slimmer, but feel better. Because of increased physical fitness, life expectancy in the nation has risen to seventy-three years, with fewer people suffering from heart disease, the nation's number one killer.

Jogging, the easiest and cheapest way of improving the body, keeps over 30 million people of all ages on the run. For the price of a good pair of running shoes, anyone anywhere can join the race.

Dieting, too, has become a national pastime. Promoters of fad diets that eliminate eating one thing or another, such as fats or carbohydrates, promise as much as 20-pound weight losses within two weeks. Books describing such miraculous diets consistently head up the best-seller lists because every corpulent person wants to lose weight quickly and easily.

Nevertheless, both jogging and dieting, carried to extremes, can be hazardous. Many confused joggers overdo and ultimately suffer from ankle and foot damage. Fad dieting, fortunately, becomes only a temporary means for shedding a few pounds while the body is deprived of the balanced nutrition it requires, so most dieters cannot persevere on fad.

Choose the alternative sentence that is closest in meaning to the given sentence.

104. Life expectancy in the nation has risen to seventy-three years.  
A) *The nation is 73 years old.*  
B) *Americans can expect to live about 73 years.*  
C) *Americans now live to be 73 years old.*  
D) *Hopefully, with exercise and improved diet, Americans may live to be 73 years old.*

105. Both jogging and dieting can be hazardous.  
A) *Dieting and jogging can damage your health.*  
B) *Jogging and dieting are less injurious.*  
C) *Both jogging and dieting can improve your health.*  
D) *People should not jog or diet.*

**Botulism** is a form of poisoning produced by a microorganism called *Clostridium botulinum*. The word botulism originated from the Latin word *botulus* for sausage, in which botulism was first identified. The spores created by *C. botulinum* are not harmful, as they grow in the soil and are consumed by us regularly when we eat vegetables and fruits. However, once the spores are put in airtight containers, the spores germinate and produce botulin, a deadly poison. Foods in cans and glass or plastic jars provide the environment botulin needs to grow. The spores are averse to low temperatures and will not develop in frozen food. Furthermore, they do not thrive in acidic, salty, sweet, or dry foods. How can consumers protect themselves against botulism? Any can that is swollen at the top may be so because of pressure from gases produced by germinating spores. When opened, if the food sprays out of the can, the contents should be thrown out immediately. You should not taste it, since the tiniest bit could kill you. "If in doubt, throw it out" is the slogan to follow.

106. The name of this form of food poisoning comes from ...

C) *poisoned sausage* D) *germinating spores*
