**Read the text. Then choose the correct answer for each question below 27-30.**

The majority of the swallows from western Europe migrate to equatorial Africa, and some even further south. Certainly their journey is very dangerous. Long sea crossings, where there is little available food or water, are generally avoided. In western Europe, most swallows cross to Africa via the Straits of Gibraltar, or fly the length of Italy before tackling the **relatively** short crossing to Tunisia in North Africa. However, in storms they may be blown hundreds of kilometers off course. Exhausted swallows sometimes come to rest on ships way out in the Atlantic Ocean. They have to cross mountain ranges too, where again the weather may be unpredictable and food scarce. Along the coast of North Africa, many young swallows become the prey of Eleonora's falcons, which time their breeding to coincide with the migration of young birds southwards. But the most dangerous part of the journey is the crossing of the Sahara desert. Here, there is little food or water, sandstorms may delay and exhaust the already weakened birds, and many die. It is estimated that around 50% of adult birds die, and up to 80% of young birds, but enough survive to ensure the continuation of the species.

**27. The word "relatively" in the passage is not close in meaning to ...**

- A) reasonably B) absolutely  
C) fairly D) comparatively

**28. Which of the following is not complication for the swallows while migrating?**

- A) the Sahara desert B) Eleonora's falcon  
C) ships in the ocean D) mountain ranges

**29. According to the text, the migration of swallows to Africa happens simultaneously with ...**

- A) Eleonora's falcons' breeding period  
B) the strong sandstorms in the Sahara desert  
C) the stormy weather in North Africa.  
D) the time of food scarce in western Europe.

**30. All of the following statements are TRUE, EXCEPT:**

- A) The crossing of the Sahara desert is the most hazardous part of the migration.  
B) Young swallows are more tolerant of migration than adult swallows.  
C) Eleonora's falcons prey on young swallows migrating southwards.  
D) Most swallows cross to the African Continent via two

different ways.
