The standard recipe has all ingredients listed first to permit the easy assembling of supplies. The directions follow either in paragraphs or numbered steps. It is necessary to know the vocabulary of cookery to read and use recipes. Otherwise, one maybe confused, for example, if a recipe says "add sugar and butter, and cream," when cream is not listed as an Ingredient. In this case, "cream" is not a noun but a verb, meaning "to mix the butter and sugar thoroughly." It is best to choose recipes that call for ingredients on hand or readily available, give accurate amounts, and tell exactly what to do with each ingredient. They should suggest a test for doneness — such as appearance, feel or temperature. They should stipulate the yield, or how much food they make.

49. We learnt from the passage that, **usually, a recipe** ... .
A) contains a great many different ingredients
B) is made using foods which are easy to obtain
C) lists the ingredients in various numbered stages

According to some researchers, the rhythmic heartbeat of parents is one of the main factors that influence baby's feelings. Several experiments have been performed based upon this hypothesis. Some babies who were crying for food were taken to a room where pre-recorded heartbeats and lullabies were playing. It was observed that the crying babies became silent and fell asleep in a short while. The researchers came up to the conclusion that, during pregnancy, babies become accustomed to the heartbeats of the mother in her womb. After the baby is born, this familiar sound becomes a sort of music that relieves the baby.
