Palmistry is the practice of 'reading hands', of gaining knowledge about personality, past individual history, and likely future events by examining the shape and size of the fingers and, most important, the lines and bumps on the palms themselves. There is some evidence that palmistry may have begun in the Stone Age. Hand outlines can be seen in black and red pigments on the walls of the ancient caves of Almira in Spain and in other European caves. Palmistry as it exists today probably had its origins in ancient India long before recorded history and found its way into western Europe through nomadic bands of Gypsies, who made contact with Europe in the 15th century.

MOTHER'S DAY

A special day for the celebration of mothers can be traced to the times of ancient Greece when tribute was paid to Rhea, the mother of many of the Greek gods.

Early Christians also paid tribute to Mary, the mother of God, during Lent. This tribute evolved into "Mothering Sunday" in England. "Mothering Sunday" is a celebration of all mothers, and is observed on the fourth Sunday of Lent.

In 1872 the idea of Mother's Day was suggested in America by Julia Ward Howe. In 1910, West Virginia became the first state to adopt a formal holiday to recognize mothers. A year later, nearly every state officially marked the day of celebration. In 1914, President Woodrow Wilson proclaimed Mother's Day as a national holiday, to be held on the second Sunday of May.

Today, Mother's Day is celebrated in many countries throughout the world, although the celebrations do not fall on the same day in every country.

Mother's Day is celebrated in various ways, depending on the country, the family, and the mother. Many families honor mothers by dining out, giving flowers, sending cards, giving gifts, and visits. Additionally, Mother's Day is reported to be one of the busiest days of the year for telephone calls.

People's eating habits are formed by a variety of factors. Even within the same family, different children can form different habits as a result of their interactions with parents and brothers and sisters. Parents' attitudes toward food have a strong influence on the development of children's attitudes and create habits that will last a lifetime. If food is used as a reward, the daily behaviors lead to a dependence on food as a source of comfort. If parents tell children to clean their plates, children may eat more than they actually need and become overweight. People who are overweight often see themselves as unattractive.

Eating too much is a common reaction to frustration and anxiety. Some people eat too much when they are tired, worried or scared. Psychologists believe that the reasons for obesity (being very fat) are frequently related to emotional problems and should be looked at in that light.
